

Reception Counters

TRESTA

design: Piotr Kuchciński

A new system of TRESTA reception counters perfectly meets the needs of our clients. These are simple, pure forms accentuated by the LED light that allow to achieve the maximum functionality of the reception area, which is a place of the first contact with the client. A variety of finishings, wide array of colours and textures as well as modern aesthetics contribute to the special character of TRESTA counters.

The system of TRESTA reception counters consists of modules which are either straight or angular, high or low. The sides of the counters can be adjusted to particular needs thanks to a broad spectrum of options: the sides can be either wide or narrow, tall or short. The top and sides are made of lightweight boards that come in two universal colours: white and grey. The fronts of the counters can be made from a variety of materials like: basic melamine board or natural veneer, matt and high-gloss lacquered surfaces or ultimately, various kinds of laminated surfaces in many intriguing colours with a high gloss. As a result of having connected different colours or even different technologies on the fronts of the reception counters, every piece of furniture does look unique.

An additional functionality is provided thanks to the interior elements of the counters, such as mobile shelves for documents and upholstered panels. It is these very elements that make the workplace look well-organised. Mounting desk outlets and cable ports in desktops and cables ducts under desks ensure the maximum functionality and ergonomics of the furniture.

The fact that TRESTA counters can be delivered disassembled is an important advantage since we are able to reduce the costs of transport then and we make it easier to carry the furniture even to the areas or rooms to which the access in case of furniture delivered in one piece would be difficult.
